

Digital Accessibility: Why Now?

Now more than ever, there's an urgent and unmistakable need for organizations to prioritize digital accessibility, with three driving factors:

1 A shift to digital-first engagement

The pandemic has forced the shift from physical to online, yet many organizations have neglected accessibility while expanding their digital footprint.

2 Heightened consumer awareness

Consumers are more aware of corporate values, evaluating companies based on those that are inclusive. Digital accessibility is a key component of DEI initiatives.

3 Mounting legal and regulatory pressure

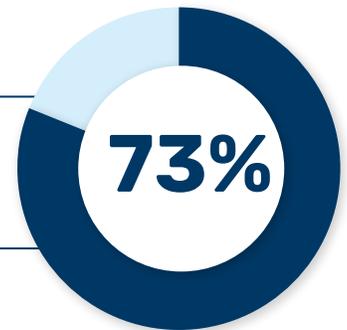

More than 10,000 digital accessibility lawsuits were filed between 2017 and 2021, with more than 265,000 demand letters sent in 2020 alone. Accessibility is a legal mandate.

1 Digital-first engagement:

COVID-19 has forced organizations to think differently about meeting consumer needs. Physical interactions have been replaced with online engagement, deepening our dependence on accessible digital experiences. Yet most websites and digital products contain barriers for people with disabilities, further widening this digital divide.

By the numbers, more than 1.8 billion people globally identify as having a disability. These consumers represent the world's largest minority group. When you include their friends and family members, you add another 3.3 billion potential customers.

Disability touches 73 percent of all consumers, regardless of ethnicity or culture.

To properly serve today's diverse market, forward-thinking organizations must adapt and make their digital assets accessible to accommodate the unique needs of every visitor.

2 Consumer awareness:

Progressive organizations include digital accessibility as a key component of their diversity, equity, and inclusion (DEI) programs. And consumers are evaluating companies based on DEI commitments, naturally gravitating toward those that are authentically pursuing inclusion. Organizations committed to creating accessible digital experiences earn, and retain, consumer trust as well as their repeat business.

**\$13
trillion**

The disability market alone, with their friends and family, controls more than \$13 trillion in disposable income.

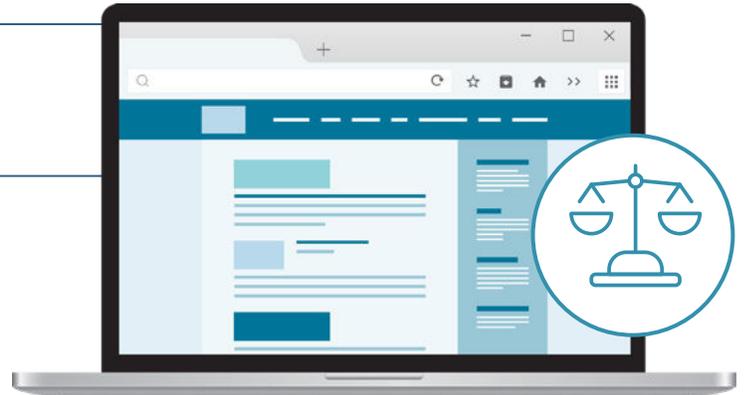

Enterprises seeking new ways to create value must consider heightened consumer awareness, align with consumer values, and capture the spending capacity of the disability market.

3 Legal and regulatory pressure:

There continues to be an escalation in the number of web accessibility-related lawsuits and legal demand letters sent. Through private enforcement, U.S. federal courts have solidified their stance that the Americans with Disabilities Act (ADA) applies to digital assets in the same way it applies to the physical world. Other laws also mandate digital accessibility, including Section 508 of the Rehabilitation Act, Canada's AODA, Europe's EN 301 549, and others.

An accessible online experience is no longer a nice-to-have; it's a legal requirement.

Organizations must avoid the costly impact of a reputation-damaging lawsuit by prioritizing digital accessibility.

An innovative digital accessibility solution

Level Access works with companies to make digital experiences accessible. Our software platform serves as centralized access to advanced tools, governance, and reporting, while our team helps navigate technical and regulatory complexities with legal expertise, code-level guidance, and on-demand accessibility training.

But our work goes beyond accessible assets. We help create and implement organization-wide accessibility policies that will meet legal requirements, foster a culture of inclusion, and earn consumer trust.
